L2
9/17/07**AMENDMENTS TO THE SPECIFICATION:**

Please amend the title of the specification on line 1 of page 1 as follows:

~~THREE-DIMENSIONAL~~ PROJECTION SYSTEM

Please amend the paragraph beginning on line ⁶12 of page 8 as follows:

L2
9/17/07

Alternatively, the images created by the two modulators are offset on the image plane. Offsetting the two images, typically by one-half of the spacing between the two pixels or less, may reduce the viewer's perception of the pixelization and create the perception of a higher resolution image. Additionally, when the images created by the two modulators is offset by one-half of the pixel pitch, an image with twice the resolution can be created for a viewer that does not wear the polarizing eyewear 122. Thus, a display with offset images can produce both three dimensional images and very high resolution two dimensional images. The offset may be in either the horizontal or vertical direction, or both.
